

NEXSCOPE / PRODUCT UPGRADE REPORT

BUILDING A SHARPER DIGITAL AGENCY EXPERIENCE.

A summary of the improvements completed in the local workspace through September 5, 2026.

CURRENT STATUS

READY FOR REVIEW

All recent work remains local and has not been pushed to GitHub.

01 / PUBLIC WEBSITE

RESPONSIVE AND CONVERSION-FOCUSED

Mobile hero responsiveness

Repositioned and constrained hero badges so Branding, Websites, and AI Automation remain visible on narrow screens without colliding or overflowing.

VALIDATED

Mobile marquee loop

Made the marquee viewport width-fluid, the track max-content and non-shrinking, and both repeated groups identical. The animation now moves exactly one group width.

VALIDATED

Outcome-based service explorer

Added an interactive homepage section where visitors choose a goal and receive a recommended NexScope service with explore and quote actions.

VALIDATED

Guided quote intake

Converted the long quote form into a two-step flow: contact details first, then project direction, service, budget, and goals. Service recommendations now prefill the matching quote option.

VALIDATED

Outcome proof section

Added a qualitative outcomes section explaining the shift NexScope creates across positioning, digital presence, growth, and operations without inventing new metrics.

VALIDATED

Mobile project CTA

Added a scroll-triggered mobile-only Start a Project action that works alongside WhatsApp and stays hidden on the quote page.

VALIDATED

02 / PROOF AND CREDIBILITY

MORE CONVINCING PROJECT STORIES

Video testimonial showcase

Added a reusable testimonial reel with project stories, play/pause behavior, automatic rotation, mobile layout, and support for real video URLs.

Admin video testimonial support

Admins can attach a direct MP4/WebM URL to a testimonial. Saved testimonials can feed the public video showcase.

Portfolio case studies

Portfolio cards now open internal case-study pages with media, challenge, approach, results, process, testimonials, and a project CTA.

Case-study editor

Admin portfolio editing now supports Challenge, Solution, Results, and Process steps. Fallback stories keep the experience usable before content is seeded.

Portfolio discovery

Added category filters and related case-study navigation so visitors can browse similar work and continue exploring without returning to the top-level grid.

VALIDATED

03 / CLIENT EXPERIENCE

A PRIVATE PROJECT COLLABORATION ROOM

Client portal workflow

- Admin creates a client login and assigns projects.
- Clients see progress, deadlines, latest updates, files, and billing.
- Daily updates can include a working video, market context, next action, and a decision prompt.
- Clients can respond securely to a project update from their portal.
- Portal refreshes manually or automatically during the workday.
- Logout now returns clients to the public homepage instead of the login page.

Email notifications

New project updates can notify the client through Resend with the update summary, video link, market context, next action, decision prompt, and portal link. Email failures do not prevent updates from saving.

04 / VERIFICATION AND NEXT STEPS

WHAT WAS VERIFIED

Responsive checks

Mobile widths tested include 320, 375, 390, 414, 430, and 768px for the marquee. The portal, case-study page, and service explorer were checked at 390px with no document-level horizontal overflow.

Code checks

TypeScript and editor diagnostics pass for the recent upgrade surfaces. Focused lint passes for the new standalone components; the large legacy admin page still contains unrelated existing lint findings.

Database

Prisma schema changes for project collaboration and portfolio case studies were synced to the configured PostgreSQL database. Prisma Client was regenerated locally.

Before deployment

Verify the Resend sender domain instead of using yourdomain.com, review real case-study copy and metrics, test client login and email delivery, then commit and push when approved.

Interaction polish

Added public page transitions with reduced-motion support and repaired the hero sticker entrance drop animation so refreshes show the intended staggered arrival.

Client Portal navigation

Added direct Client Portal access to both desktop and mobile navigation at /portal/login, while keeping the admin route private.
